3520 Series Leak Tester

Product Specifications

Purpose-built for the demands of manufacturing

The patented 3520 Series Leak Tester delivers industry-leading accuracy and fast cycle times. The result of years of dedicated research and development and customer testing, the 3520 Series is delivering spectacular results to manufacturers.

Accurate
- Pressure measurement resolution – down to ±0.000,01 psi
- Pressure control resolution – down to ±0.000,01 psi
- Flow measurement – down to ±0.2% of full scale

Fast
- Ultra-fast fill
- Fast pressure stabilization
- Fast pass/fail decisions

Flexible
- Wide range of tests
- Test any part
- Configurable software

Easy
- Easy to use, maintain and service
- Self-test mode for automatic verification
- Simple calibration processes
- Easy access to the unit

Intelligent
- Web-based setup and diagnostics
- Ethernet interface
- Advanced Process Signature Verification (PSV) software
- Rich data output
- Remote control and operation

Use the 3520 Series for:
- Pressure decay
- Vacuum
- Flow
- Blockage
- Volume measurement
- Burst testing
- Helium evacuate and fill
- Customizable pressure and flow sequencing
Key Features

**Designed to provide superfine accuracy**
- Highly optimized manifold design
- Separation of controller and pneumatics enable placement of system close to the device under test, reducing hose length and minimizing other factors that affect accuracy
- High quality sensors, including a MEMS digital flow meter for 5x better accuracy
- Precision measurement electronics, featuring three high speed processors, quad 24-bit A/D converters and sub micro volt level PCB design and layout
- µPSI pressure regulation with advanced electronic dual stage proportional valves

**Temperature compensation that works**
Available as an option to compensate for environmental factors, seasonal temperature fluctuations or hot/cold parts and washing.
- Two channels for part and ambient temperature sensing with a resolution of 0.0001°C
- Uses high accuracy, low noise resistance temperature detector (RTD) sensors

**Ultra-fast fill and stabilization**
The 3520 Series incorporates innovations to deliver fast cycle times without sacrificing accuracy.
- Dual high speed electronic servo regulator design
  - High flow fast fill up to 300 slpm with ½” diameter ports and valves to move air quickly
  - Second stage high precision regulator and orifice for superb pressure and flow accuracy

**Proven signature analysis software**
The 3520 Series uses Sciemetric’s PSV software, either on a sigPOD or on an industrial computer, to control the module.
- Advanced algorithms provide the industry’s best defect detection
- Flexible configuration accommodates any test algorithm
- Proactively manage production by reviewing thousands of records directly on the test stand, using built-in control charts, histograms and other SPC tools

Sciematic's Process Signature Verification (PSV) software
Web-based setup and diagnostics
Each 3520 Series module can be accessed remotely via any device with a web browser to view or manage:
- IP settings
- Information such as versions, CPU usage, memory usage, live readings including diagnostics (supply pressure, pilot pressure, supply voltage, etc.)
- Configuration: software profile (IP, name, units)

Tuning Assistant for ease of setup
The software includes a tuning assistant feature that allows complete tuning of the leak test for optimized test results including fill and test times and PID valve control.

Self-test mode for automatic verification
The unit under test (UUT) isolate valve allows complete self-test without any external connection changes.
- All aspects of the leak circuit are checked
- Self-test has access to external calibration port for cross-check
- Issues can be identified and pinpointed to the component level

Simple calibration processes
The 3520 Series software and pneumatics support a very simple process to fully calibrate the system:
1. Pressure
2. Flow
3. Part volume (for pressure decay)

Easy to maintain
The module is designed to be accessible to simplify maintenance.
- Four hex screws to access the inside of the unit
- All parts come out as a single unit
- Valve cartridges are replaceable
Technical Specifications

GENERAL
- Dimensions (HxWxD): 117.8 x 264 x 210 mm (7” x 10.4” x 8.25”)
- Operating temperature: 5 – 40°C
- Operating humidity: 8 – 90 %
- Elevation: ≤2000 m
- Finish: powder-coated aluminum
- Environmental: IP65, Pollution Degree: 2
- Mounting options: Integrated wall mount brackets
- Vibration mounts: Included and required for operation
- Weight: 10.2 kg (22.5 lbs.)
- Approvals: CE, cNEMKOus

ELECTRICAL
Input power
- Connector: M12 4 pin T-code plug
- Supply: 24 V (22 to 26 VDC)
- Ripple: <250 mV peak to peak
- Power (Max): 40 W (including all accessories)
- Power (Typ): 10 W (single channel leak test)
- Power (Idle): 6 W
- Inrush current: 5 A for 0.25 s

Ethernet
- Connector: M12 4 pin D-code socket
- Data rate: 100/10 Mbps

External valve interface
- Connector: M12 8 pin A-code socket
- Valves: (4×) 2.5 W at 24 V

Temperature input (×2)
- Connector: M12 4 pin A-code socket
- Sensor: 100 Ω Platinum RTD
- Excitation: 1.25 mA
- Range: 0 °C to 200 °C
- Noise: <0.001 °C rms
- Bandwidth: 10 Hz

PNEUMATIC
Leak test system
- Number of test channels per 3520: 1
- Valve Life Rating: 10,000,000 cycles (high flow manifold); 100,000,000 (low volume manifold)
- System Leak: <0.02 SCCM at 10 psig
- Fill rate (max): 300 SLPM (high flow manifold); 20 SLPM (low volume manifold)

Air supply preparation for supply and pilot
- Standard: ISO 8573.1:2001 Class 1.4.2 or better
- Pre-filter: ≤ 5 μm
- Air Dryness: ≤ 3 °C Dew Point
- Oil Concentration: ≤ 0.1 mg/m3
- Gas compatibility: Air, Helium (consult factory for compatibility with other gases)

Supply pressure
- Maximum: 100 psig for positive pressure; 5-3 psi below desired test pressure for vacuum pressure
- Minimum: 5-20 psi above test pressure for positive pressure; 13.75 psiv (28” Hg) for vacuum pressure
- Required Flow Capacity: 1000 SLPM (35 SCFM) or higher at 100 psig
- Stability: ±0.1 psi
- Pre-Regulation: Precision input regulator with supply pressure effect < 0.1 psi per 100 psi input pressure change is required (see optional accessories list).

Pilot pressure (high flow manifold only)
- Minimum: 30 psi or supply pressure, whichever is greater
- Maximum: 135 psig

Test pressure sensor
- Range Selection: (see model chart)
- Accuracy: ±0.25 % of FS, best-fit straight line
- Temperature error band: ±1.0 % of FS from 4 °C to 60°C
- Noise: < 10 ppm rms of FS (<0.001 % of FS) - 300 Hz bandwidth
- < 1 ppm rms of FS (<0.0001 % of FS) - 1 Hz bandwidth
- Resolution: 0.06 ppm of FS

FLOW METER (flow models only)
- Range Selection: (see model chart)
- For Full Scale Ranges ≤ 3000 SCCM Accuracy at 25 °C¹
  - ±1 % of reading when value is > 10 % of FS
  - ±0.2 % of FS when value is < 10% of FS
- For Full Scale Ranges ≥ 10 SLPM Accuracy over full temperature range:¹
  - ±2 % of reading when value is > 10 % of FS
  - ±0.5 % of FS when value is < 10% of FS
- Repeatability:¹
  - ±0.1 % of reading when value is > 10 % of FS
  - ±0.1 % of FS when value is < 10% of FS
- Pressure coefficient: ±0.014 % of reading/psi
- Response time: 4 ms (0.004 s)

General Features
- Valve-operated calibration port
- Supply pressure sensor
- Pilot pressure sensor
- Internal variable flow self-test orifice
- UUT isolation valve
- Internal temperature sensor
- Diagnostic waveforms (supply voltage, supply current, control P, I, D and output values, PID response time)
- Fully adjustable control loop settings for electronic regulators
- Air piloted valves to reduce effects of heat in high flow manifold version
- Latching valves reduce effects of heat in low volume manifold version

FULL SCALE OF FLOW SENSOR IS SWITCHABLE WITH TWO RANGES AS FOLLOWS:
- 10 SCCM and 50 SCCM
- 100 SCCM and 250 SCCM
- 1000 SCCM and 3000 SCCM

- For Full Scale Ranges ≥ 10 SLPM Accuracy: ±1.5 % of FS (15 to 25 °C)
  Repeatability: ±0.5 % of FS
  Temperature coefficient: <0.15 % of FS/°C
  Pressure coefficient: <±0.01 % of FS/psi
  Response time: 6 s for ±2 % of FS for readings of 25 to 100 % of FS
  - Over range protection: Pressure is reduced to ensure no damage to flow meter
  - Minimum Resolution: 0.02 %
  - Bandwidth: 10 Hz

UUT= Unit under Test
FS= Full Scale
¹ 10 SCCM range values are 2x higher.
System Diagram

A 3520 Series Leak Tester system uses a sigPOD or PC running Sciematic software (PSV, IPT or custom) as a controller. The controller can be placed in an optimal location for the operator and is connected via Ethernet to the 3520. It interfaces with the PLC, QualityWorX database (if applicable) and operator to download the control sequence to the 3520. The 3520 unit runs the sequence independently and sends the data collected to the controller. The controller then performs the analysis and final pass/fail decision. Up to four leak channels can be controlled with one sigPOD or instance of PSV software; higher channel counts are available with IPT Suite or custom software.

The figure below shows a typical installation including air preparation, precision pre-regulator for supply and pilot pressure, Ethernet connection between the controller (sigPOD) and the 3520 unit, 24 VDC power connection, UUT connection, external calibration orifice, as well as optional part and ambient temperature sensors.

Configurations showing the use of optional external multiplexer valves connected to the UUT port of the 3520 Series to test up to four chambers, parts or test configurations can be found in the product user guide. The external multiplexer valves can also be connected to the supply port of the 3520 unit to multiplex in different supply sources such as shop air, vacuum and helium. This allows the 3520 to perform evacuation and fill procedures automatically, with test zones at each stage.

Ordering Information

Example: 10500-3520-D0AC

3520 Series Leak Tester Module optimized for large part volumes, 0 to 30 psig absolute pressure transducer, 10/50 SCCM mass flow meter range, dual precision electronic regulators, 2 temperature inputs and 4 digital outputs. Includes: power and Ethernet connectors and vibration mounts.

*Leak Master must be specified upon ordering.*
